## 3. What is Adaptxt?

Adaptxt is the next generation of text input software, providing text entry assistance on hard keyboard and touch-screen devices. Adaptxt powered by Predictive Text2.0 engine provides accurate and relevant next word prediction, error-correction & word completion inputs by combining the best of artificial intelligence and computing technology.

As you start typing, the Adaptxt keyboard provides word suggestions in the **Suggestion Bar**. Tap your finger on the expandable button to view all the suggestions available and tap on one of them to enter the text.

While you type, Adaptxt learns and adapts to your writing style, to provide you with personalized suggestions. Adaptxt provides two types of dictionaries:

- **Language dictionaries:**  
These dictionaries work simultaneously and provide multilingual suggestions to users who need to move quickly between different languages during text input. Each dictionary comes with a language specific on-screen keyboard.
- **Industry-specific dictionaries:**  
These dictionaries provide industry-specific terminology, acronyms, company names and web addresses. They cater to different professional sectors such as Medicine, Business, Law, Finance, and IT & Telecom. These dictionaries are also available in multiple languages.  
You can download these Language and Technical add-ons from Adaptxt's **Add-on manager**, as explained in the following sections.

## 4. Setting up Adaptxt

Adaptxt can be downloaded from the [Google Play Store](https://play.google.com/store/apps/details?id=com.adaptxt), [GetJar](http://www.getjar.com) or the [Amazon](http://www.amazon.com) Appstore and installed directly to your device.

Once Adaptxt has been downloaded on the phone, tap on the Adaptxt icon  on the phone menu and the following screens would appear sequentially through the installation process (1-10).

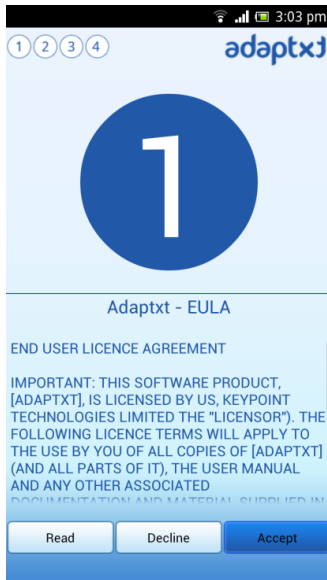

Image 1

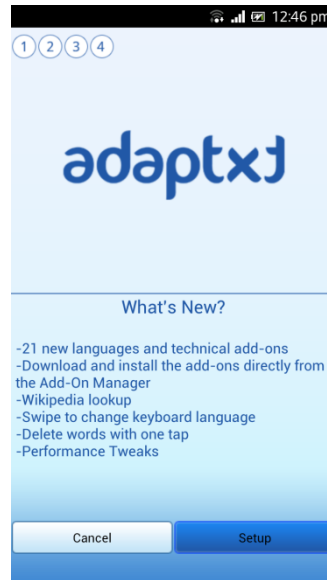

Image 2

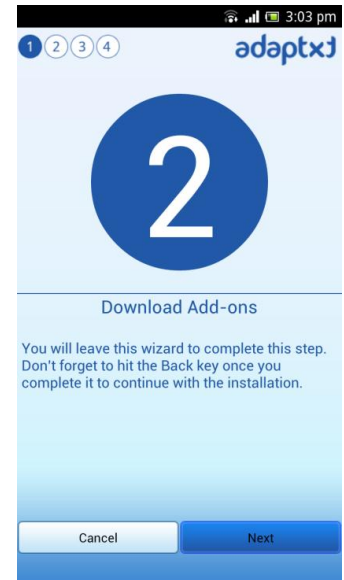

Image 3

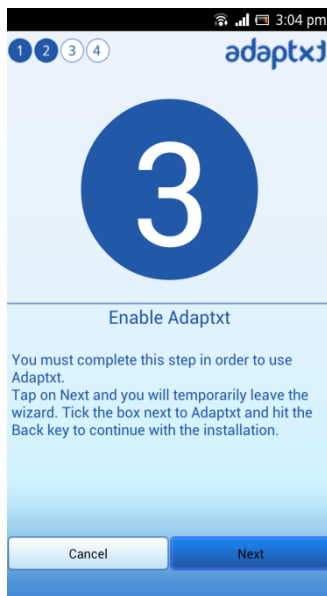

Image 6

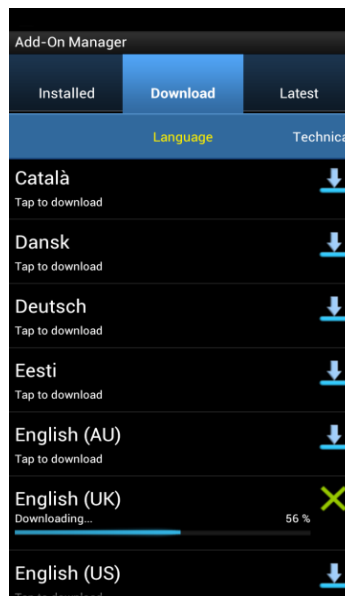

Image 5

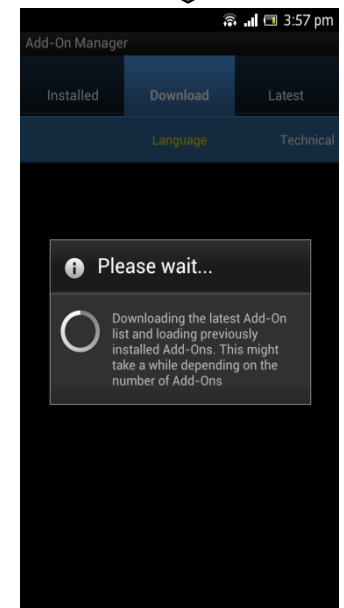

Image 4

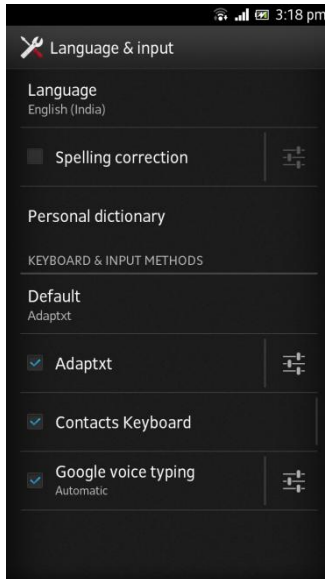

Image 7

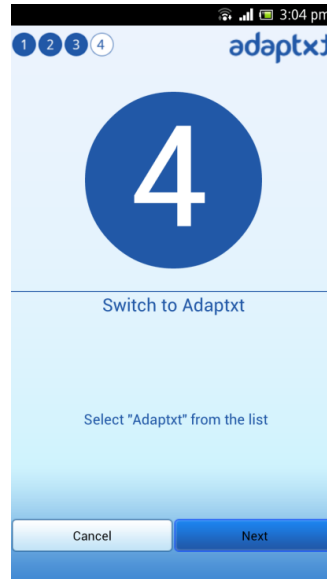

Image 8

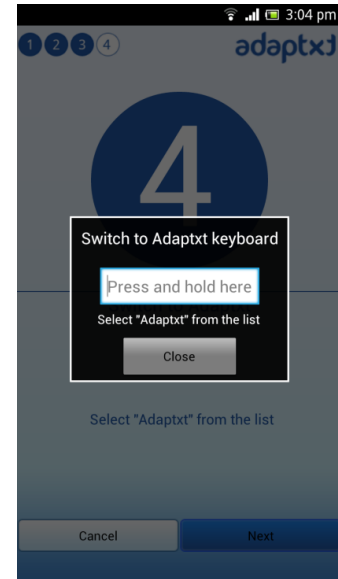

Image 9

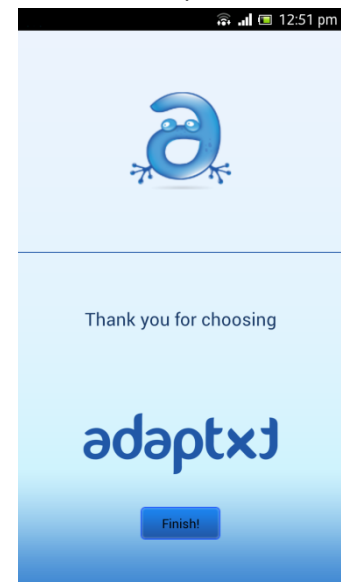

Image 10

1. Tap on **Accept>Setup>Next**
2. When the **Add-on Manager** screen is displayed, tap and download the **Language/Technical** add-ons required.
3. Tap on the **Back key>Next**
4. Enable **Adaptxt** in **Keyboards and input methods>Next**
5. Select and set **Adaptxt** as your default keyboard from the list.
6. Tap on **Finish** and you would be directed to the setting screen along with a FAQ pop up window.

The on-screen keyboard (SIP) and the word suggestions in the **Suggestion Bar** will correspond to the language priorities you defined in the Adaptxt settings.

## 5. Dictionaries

### 5.1 Language and Technical Add-ons

After the initial add-on installation process, Adaptxt is prepared with language dictionaries that work simultaneously and provide multilingual suggestions to users who need to move quickly between different languages during text input. The Language and Technical add-ons can be directly downloaded from the in-app [Add-on Manager](#).

### 5.2 Changing Add-ons

- Swipe across the **space bar key** to change language and select between various installed add-ons while typing (Image 11 & 12).
- On the Adaptxt keyboard the name of the selected add-on will be displayed on the space bar.

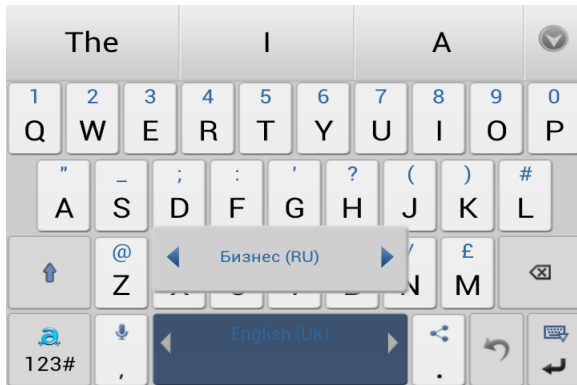

Image 11

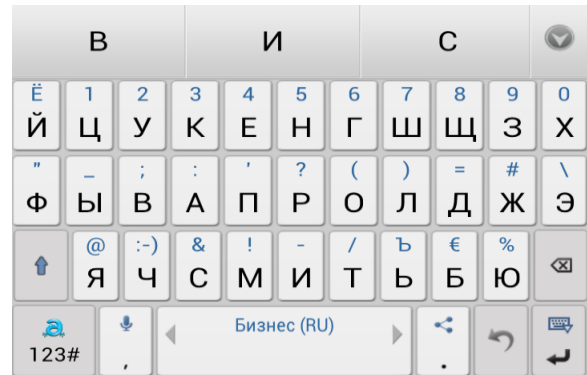

Image 12

## 6. Using the Suggestion Bar

- Adaptxt offers error corrections and relevant word predictions on the suggestion bar as the user enters text. This feature enables you to type less and write more using the personalized suggestions.

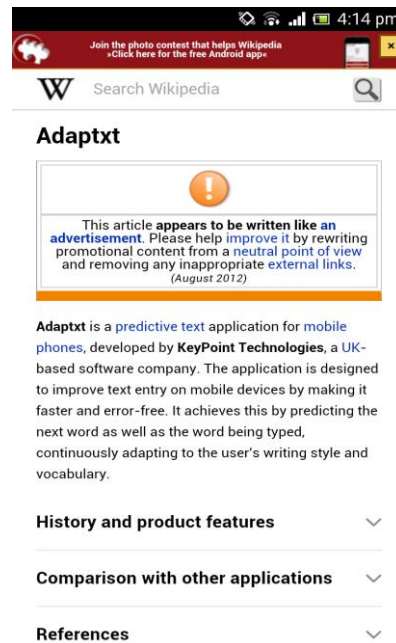

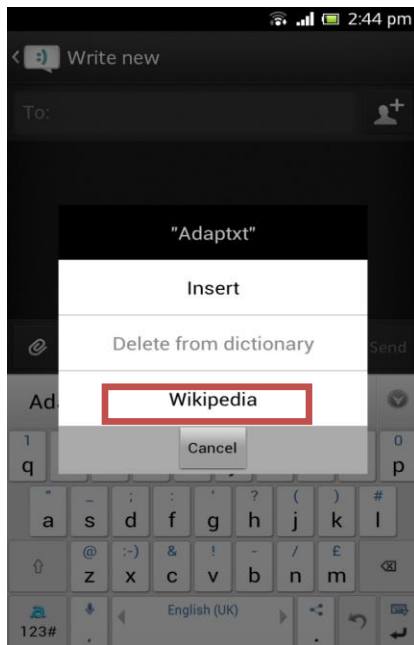

- As you type, the **Suggestion Bar** above the keyboard provides [auto correction](#) and next word predictions that are relevant to the context you are typing.
- Tap on any of the suggestions to enter it in the text.

- To have more suggestions, tap on , which expands the suggestion bar as shown above.

## 7. Search Meaning of Words

- Long press on a word in the Suggestion bar will allow the user to look up the meaning of a word via Wikipedia; the user will be directed to the link with the word's meaning.

## 8. Deleting words

- Press the **Backspace key**  once to delete one character at a time.
- Press and hold the **Backspace Key** to quickly delete one word at a time.
- You can also delete a word with a single tap by placing the cursor/caret within the word's premises and tapping on the **Bin symbol**  (Image 13 and 14).

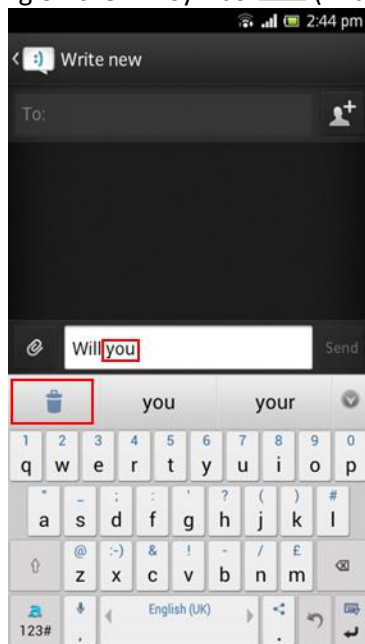

Image 13

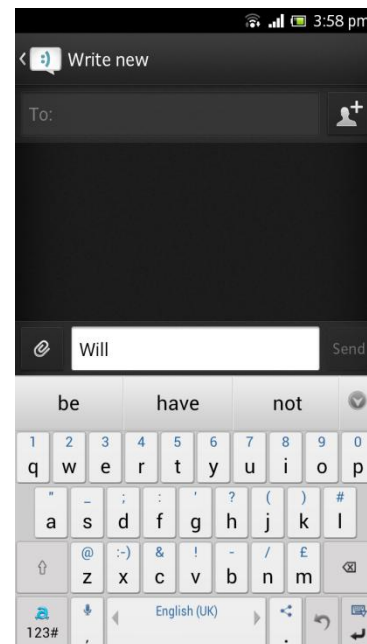

Image 14

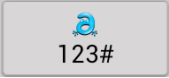

## 9. Hide Keyboard

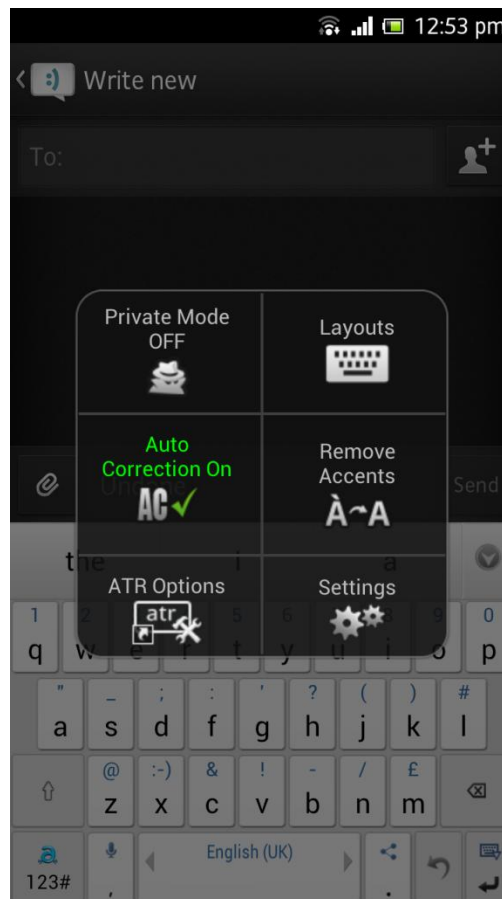

- Long press on the “**Enter/Hide**” key  will close and hide the keyboard on the device.

## 10. Adaptxt Quick Settings Screen

This key can be used to access frequently used features, Quick settings can be accessed in the following way:

- Long press and release the **Quick settings key**  to get the pop-up menu.

**Quick Settings** gives access to the following features:

1. [Private Mode](#): With private mode on, Adaptxt dictionary does not learn user typed words.
2. [Remove Accents](#): Single tap on this key removes all accents or diacritics from the text entered.
3. [Layouts](#): To select your preferred layout.
4. [Auto Correction](#): Provides auto corrections in the suggestion bar while typing.
5. [Settings](#): A shortcut key to all the Adaptxt settings as described before.
6. [ATR Options](#): Allows adding or deleting shortcuts to a text or phrase

## 11. Auto Correction and Revert Correction

### 11.1 Auto Correction

The auto correction feature provides suggestions that will automatically replace the mistyped word on tapping the **space key**.

- Tap on **Quick Settings key** and then tap on the **Auto Correction** option to enable or disable Auto Correction as show in the **Quick Settings** view.
- Auto Correction can be enabled or disabled from the **Settings** menu as well.

### 11.2 Using Auto Correction

- This type of suggestion is displayed in **blue** font color along with a blue cross symbol  on the left hand side of the word as shown in the picture below (Image 15).
- Tap on the blue cross  to dismiss the auto-corrected word.
- The auto-corrected word can be entered by tapping on the word or by simply pressing the **Space key**.
- If the word you entered is not present in any of the installed Adapttxt dictionaries, it will be stored in the personal dictionary and will be automatically displayed when you access **My Dictionary**.

**Note:** Auto Correction is enabled by default.

### 11.3 Auto Correction Modes

This setting is used to define the strength of auto correction: High, Medium or Low (Image 16).

- Tap on **Auto Correction Modes** to set the strength of Auto Correction. You can choose from three different modes: **High**, **Medium** and **Low**.
- Auto Correction Mode is set to **Medium** by default.

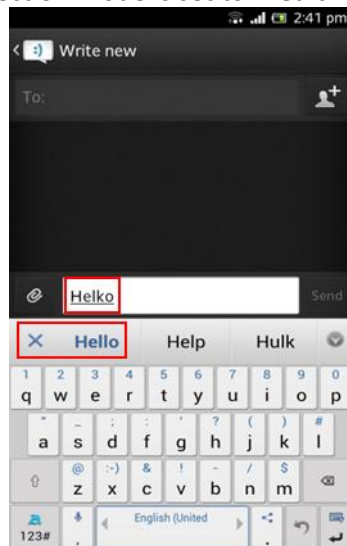

Image 15

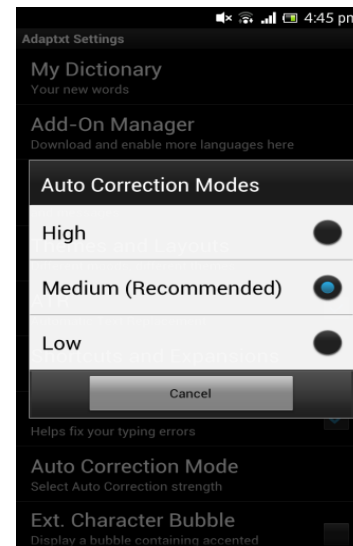

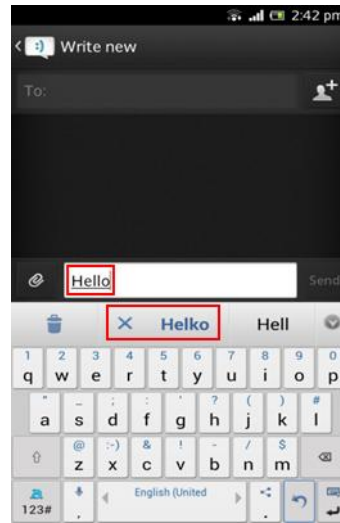

Image 16

## 11.4 Revert Correction

- This feature allows a user to revert back to the initially typed word instead of the suggested auto correction word.
- Navigate cursor/caret just after the auto corrected word and tap on the original word in the suggestion bar to replace the auto corrected word.

## 12. Undo Auto Correction

- This feature allows a user to undo auto correction and revert back to the initially typed word using the

## 13. Accessing Adapttxt Settings

The Adapttxt Settings can be accessed in the following ways:

- Long press and release the **Quick settings key**  and then tap on **Settings**.
- By accessing phone **Settings > Language & input** and then tapping on **Adapttxt Settings**.
- Alternatively, you can access the Adapttxt Settings by tapping on the **Adapttxt** icon from your device application menu.

## 14. Adapttxt Settings Screen

The following functions are available through the Adapttxt Settings Screen (Image 15 & 16):

1. [My Dictionary](#) - to view and manage all the words in your personal dictionary
2. [Add-On Manager](#) - to enable, disable, prioritize and download the in-app Adapttxt add-ons
3. [Personalize Suggestions](#) - to learn from social networks, SMS and phonebook to provide personalized suggestions.
4. [Themes and Layouts](#) - to select your preferred theme and layout
5. [ATR \(Automatic Text Replacement\)](#) – to assign a certain text or phrase as a shortcut
6. [Shortcuts and Expansions](#) - to Add or Delete ATR options
7. [Auto Correction](#) – to enable/disable Auto Correction
8. [Auto Correction Mode](#) - to define the strength of Auto Correction

9. [Ext. Character Bubble](#) - to display special characters in a pop-up window
10. [Sound & Vibrate](#) - to set the desired feedback on key presses
11. **Check for the Latest Version** - to download the latest version available
12. [Help](#) - to display the Adapttxt Tutorial and access the FAQ section online
13. **Share** – to share Adapttxt with others
14. I  **Adapttxt** - to like Adapttxt on socials
15. **Rate Adapttxt** - to rate and comment on Adapttxt on the Play store
16. [Support@adapttxt.com](mailto:support@adapttxt.com) - to send an email to our Product Support Team
17. [KeyPoint Technologies](#) - to visit our website

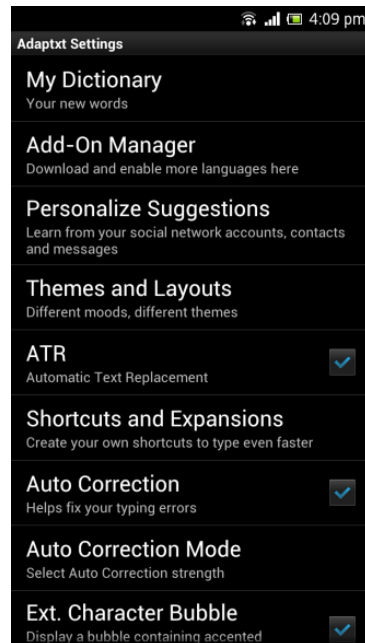

Image 17

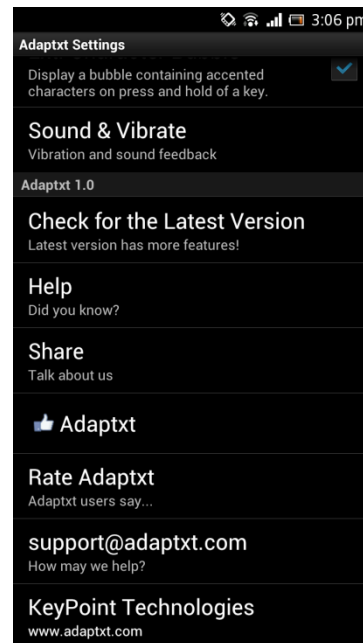

Image 18

## 14.1 My Dictionary Screen

This screen allows you to view and manage all the words from your personal dictionary as shown in the picture (Image 12). By default Adapttxt learns user typed words and adds them to the personal dictionary (passwords are not learnt). Words are not learnt when **Private Mode** is turned **ON**.

### Main functions in My Dictionary:

- **Back up My Dictionary:** select this if you want to back up all the new words saved so far in your personal dictionary (Image 19). **Note:** This function requires an SD Card.
- **Restore:** allows you to restore words that were saved previously.
- **Delete word:** Tap on the bin symbol  adjacent to the word you want to remove from My Dictionary. The word will be deleted and not offered as a suggestion anymore.
- **Delete all:** tap on the **Menu Key** on your phone to display this option. Next, tap on **Delete all** and press 'OK' on the pop up window to confirm or press 'Cancel' to discard the process (Image 20).
- **Search:** tap on the **Menu Key** on your phone to display this option. Select it to open a search field and look for a word in My Dictionary (Image 21).

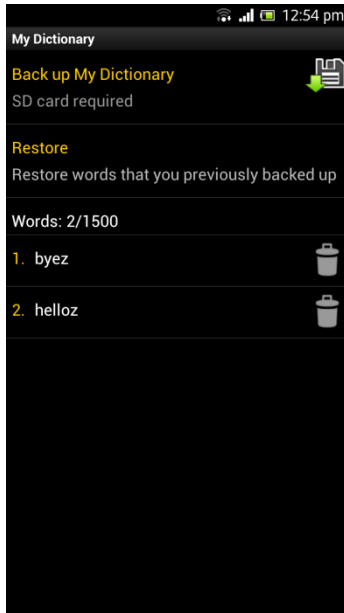

Image 19

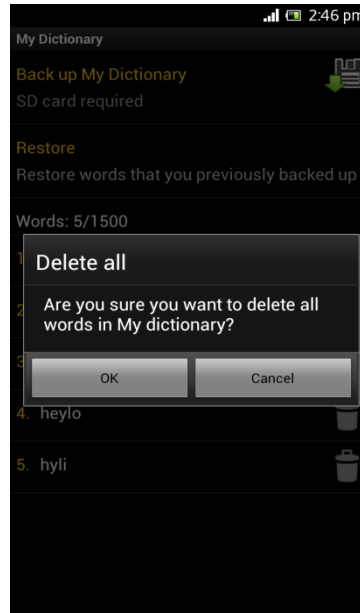

Image 20

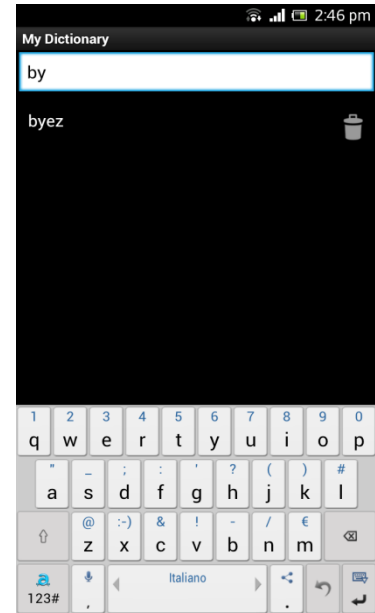

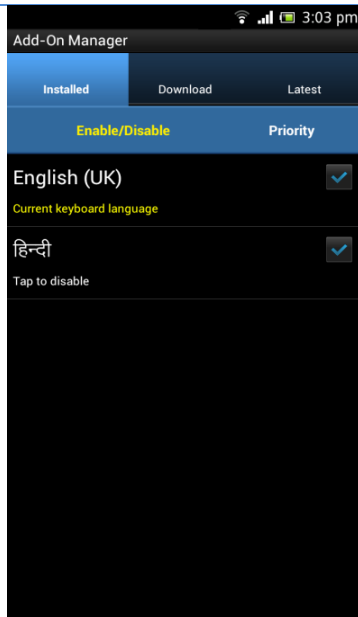

Image 21

## 14.2 Add-on Manager

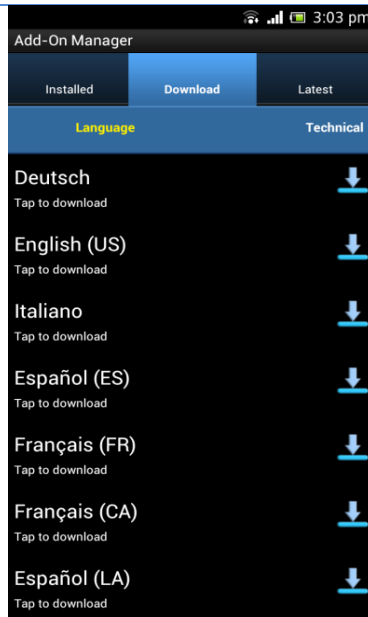

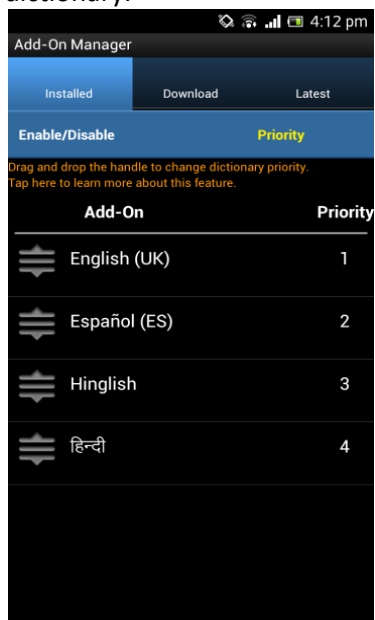

- The Add-on Manager screen allows you to enable, disable, download and prioritize add-ons.
- It has three main tabs: **Installed** and **Download** and **Latest** which are further divided into various tabs as explained below:

| 14.2.1. Installed                                                                                                                                                                                                                                                            | 14.2.2. Download                                                                                                                                                                                                               | 14.2.3. Latest                                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <p><b>1. <u>Enable/Disable</u></b></p> <ul style="list-style-type: none"> <li>• In order to start using Adaptxt, at least one add-on dictionary needs to be enabled.</li> <li>• Once the add-ons are installed, tap on it to enable it or disable it accordingly.</li> </ul> | <p>Shows list of languages and industry verticals available for download.</p> <p><b>1. <u>Language</u></b></p> <ul style="list-style-type: none"> <li>• It provides the list of all the language add-ons available.</li> </ul> | <ul style="list-style-type: none"> <li>• Displays list of latest languages that have been updated for download.</li> </ul> |

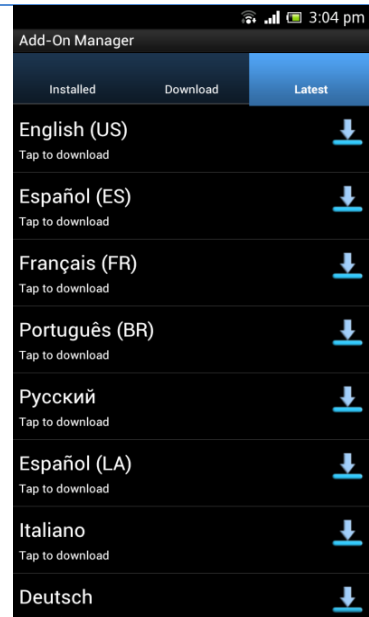

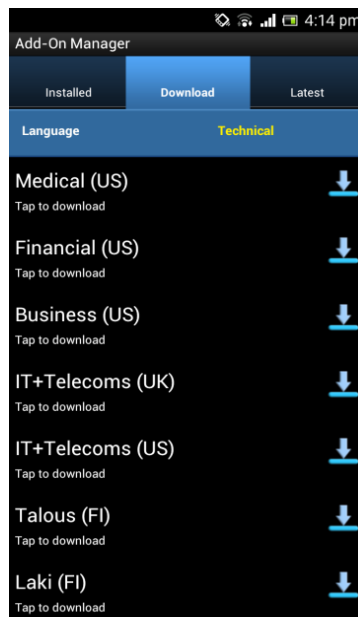

## 2. Priority

- Scroll horizontally to switch to **Priority**.
- Drag and Drop any of the add-ons using the scroll handle on the left in order to change dictionary priorities.
- Word suggestions and error corrections will first be generated from the prioritized dictionary.

## 2. Technical

- Scroll horizontally to switch to **Technical**.
- This includes the list of all industry-specific dictionaries available.

## 14.3 Personalize Suggestions & Post to Social Networks

- This feature allows Adapttxt to learn from data from contacts, social network accounts and messages to provide personalized suggestions.
- You can easily post messages to your preferred social networks directly from the Adapttxt keyboard.

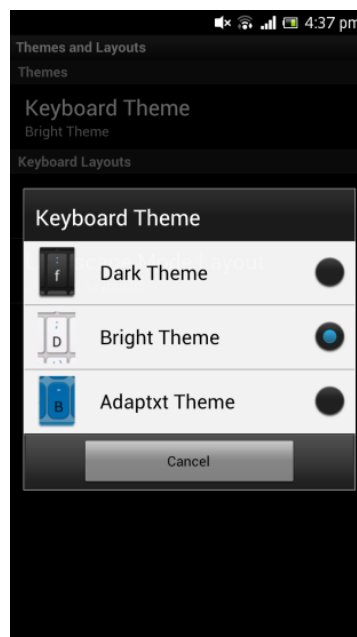

- Press and hold the “**Share**” Key  in order to post the current message to social networks like Facebook and Twitter.

## 14.4 Themes & Layouts

### 14.4.1 Themes

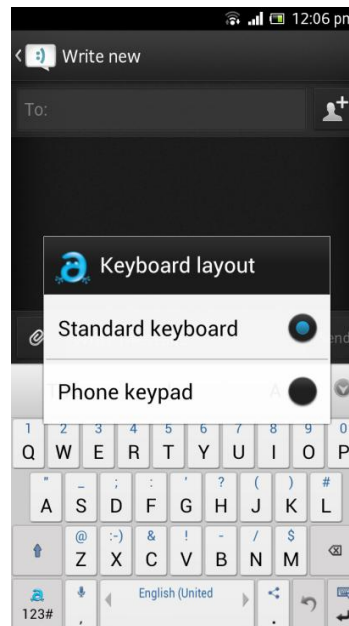

- This setting is used to select your preferred theme. By default the theme is set as the **Bright Theme**.
- Tap on the **Keyboard Theme** option to select between the provided themes:

### 14.4.2 Layouts

Tap on it to choose between the **Phone Keyboard** and the **Standard Keyboard** Layout. You can choose between two different keyboard layouts:

- **Standard keyboard:** It provides pc-like keyboard layout designed specifically for each language. To select standard keyboard: press and hold the **Quick Settings Key >Layouts>Standard Keyboard**.
- **Phone Keypad:** It provides a 12-key layout if available based on the language selected. To select Phone Keypad: tap on the **Quick Settings Key>Layouts>Phone Keypad**.

## 14.5 ATR (Automatic Text Replacement)

- ATR or Automatic Text Replacement allows the user to assign a certain text or phrase to a shortcut. The user can create custom shortcuts for multiple phrases.
- ATR is **enabled** by default, tap the check box to enable or disable ATR accordingly.
- By default one ATR per add-on will be present in the ATR list. ATR can also be accessed through the [Quick Settings key](#).

## 14.6 Shortcuts and Expansions

- Tap on **Shortcuts and Expansions** option to access the ATR screen. Tap the **menu** button to add or delete shortcuts (Image 22).

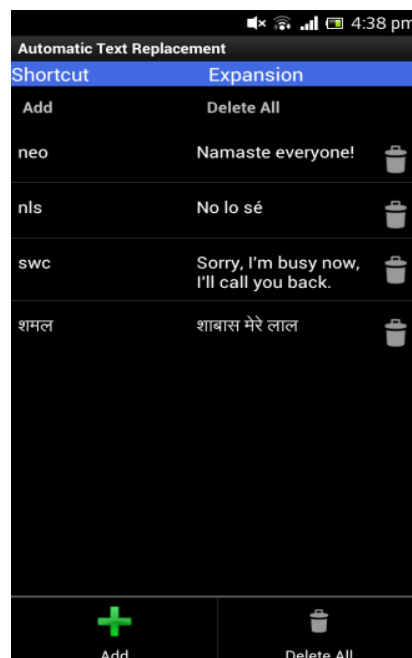

Image 22

### 14.6.1 Adding a shortcut

The ATR shortcut is displayed in a **blue** font color in the suggestion bar. All shortcuts are displayed by a distinct “+” symbol before the text.

- **ATR Example (Image below):**

1. Type “cul” in the **Shortcut** text box. Next, type “call you later.” in the **Expansion** text box (Image 23).

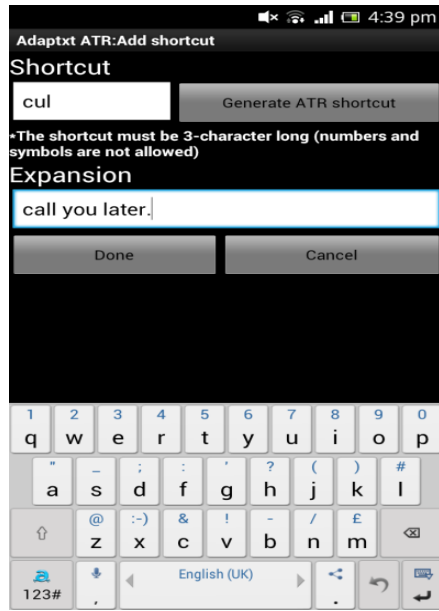

Image 23

2. Tap on ‘Done’ to save the ATR shortcut or tap on ‘Cancel’ to discard the process (Image 24).

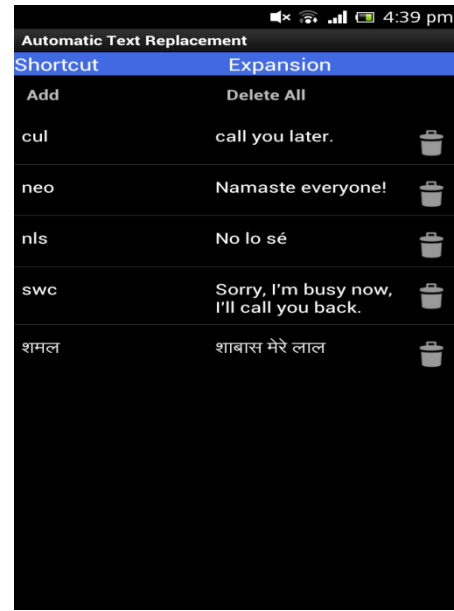

Image 24

3. Go back to message editor and type “cul” in the text box and the same word is shown in the suggestion bar as “+Cul” (Image 25).

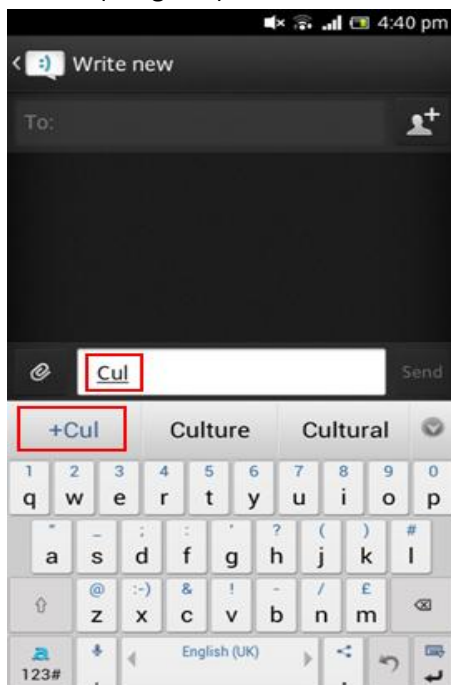

Image 25

4. Tapping on “+Cul” will enter the expansion “call you later.” in the text box (Image 26).

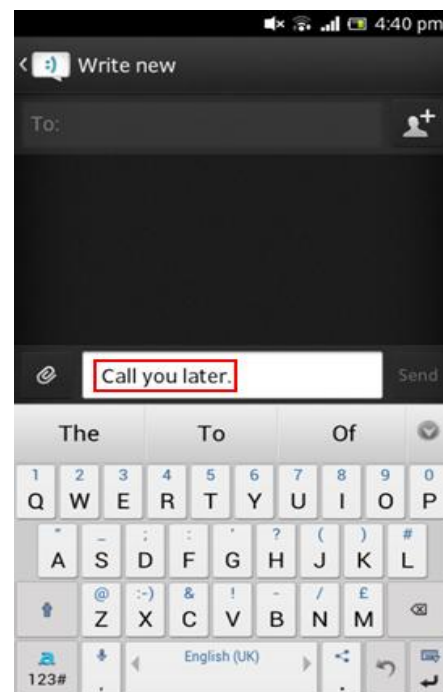

Image 26

#### Note:

- ATR shortcuts would not be shown as error correction.
- The user needs to type in the entire shortcut, for the expansion to appear in the Suggestion bar (Sbar).
- **Generate ATR Shortcut** can be used to generate a shortcut automatically based on the expansion entered.

### 14.6.2 Deleting a shortcut

- To delete ATR words present in the list individually:

- Tap the bin symbol  adjacent to the ATR word to be deleted.

- To delete all the ATR words present in the list

- Tap on **Menu key** on the device and press **Delete All** to delete all the shortcuts.
  - Select **'OK'** on the pop up screen to delete all shortcuts or select **'Cancel'** to discard the process.

### 14.7 Extended Character Bubble

This feature displays special characters in a pop-up window.

- Tap on the **Extended Character Bubble** option to enable or disable the display of characters with accents and diacritics when pressing and holding a character key.
- Tapping on each key will render different extended characters.  
Example: The character "A" renders the following extended characters.

### 14.8 Sound & Vibrate

This is used to set the desired feedback on key press.

- **Vibrate on Key Press:** select this option if you want to enable haptic feedback for each key press.
- **Sound on Key Press:** select this option if you want each key press to produce a sound.

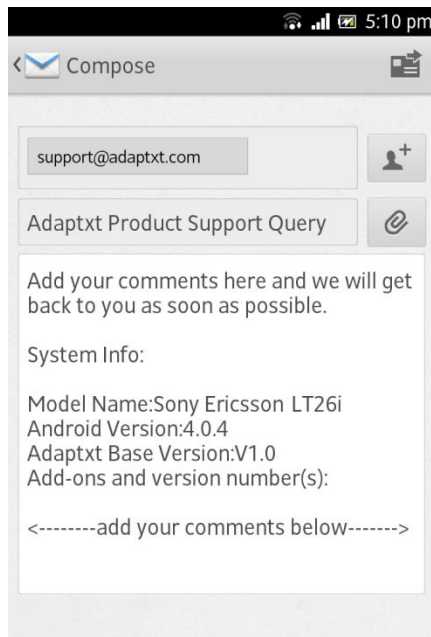

**Note:** vibrate on key press and sound on key press is **enabled** by default.

### 14.9 Help

- Tap to display the Adaptxt Tutorial and to understand and implement the features.

### 14.10 Support

This option allows you to send us an email to the product support team regarding the feature requests, queries or concerns about Adaptxt. Tap on the option and Adaptxt will open the user configured email client, with predefined content in email address, subject and body fields.

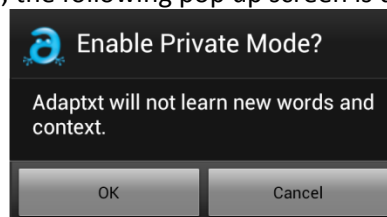

## 15. Private Mode

Using the Private Mode feature, you can prevent Adaptxt from learning new words or context.

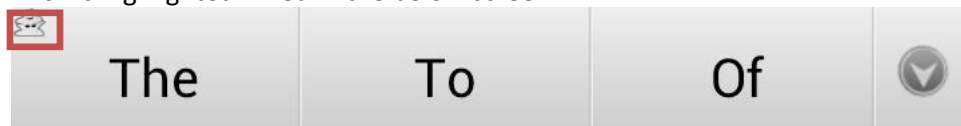

- Long press and release the **Quick settings key**  to get the pop-up menu. Tap once on **Private Mode** to **enable** it and tap twice to **disable** it. By default Private mode is always switched **OFF**.

### 15.1 Enable Private Mode

- Tap on '**Private Mode OFF**' as shown in the above screen, to switch it **ON** (Private Mode is OFF by default).
- When '**Private Mode**' is switched **ON**, the following pop up screen is displayed:

- Press **OK** to enable Private Mode.
- On clicking the '**ok**' button in the above screen, user is redirected back to the editor where the suggestion bar will display a small icon at the top left of the suggestion bar indicating that Private mode is on which is highlighted in red in the below screen.

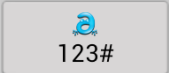

### 15.2 Disable Private Mode

- Tap on '**Private Mode ON**' to switch it **OFF**. The Adaptxt learning engine will start learning the entered words again.

## 16. Remove Accents and Diacritics

Remove Accents and Diacritics feature can be accessed in the following way:

- Long press and release the **Quick settings key**  to get the pop-up menu and tap on **Remove Accents and Diacritics** to use it.

**Example:**

- If the text entered is “Café” as shown below:

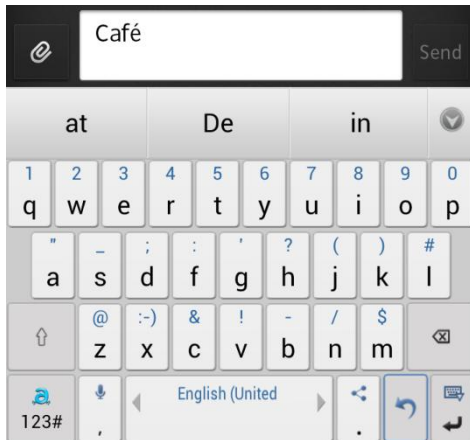

Image 27

- Select and tap on the Remove Accents and Diacritics option (Image 29).

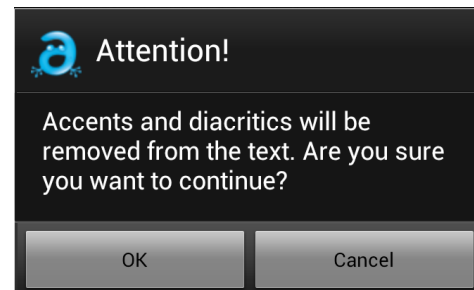

Image 28

- A notification will be displayed (Image 30).

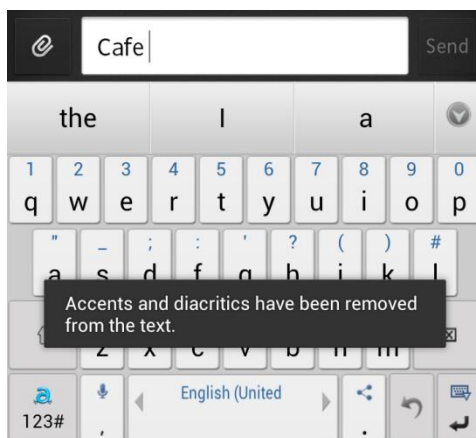

Image 29

- The accents / diacritics free text will be rendered as “Cafe” (Image 31).

## 18. Other Keyboard Functions

### 18.1 Special Characters

To enter special characters like "[", "]", "<", ">", "{", "}" etc, the following options are available:

- On the **Primary** Keyboard press and hold the keys with special characters to render them on the editor (Image 31).
- Special characters can also be entered directly by switching to the **Secondary** and **Tertiary** keyboard screens (Image 32 & 33).

### 18.2 Lower Case and Upper Case

- Press the **Caps key** on the keyboard once to switch from lower case to upper case or twice to enable caps lock. Tap again on the **Caps key** to return to lower case.
- Character keys and word suggestions will change case accordingly.

### 18.3 Smileys

- Long press on the ‘:-)’ key on the keyboard to select and insert Smileys.

### 18.4 URL Functionality

- Long press on ‘∞’ key Adapttxt will provide bubble with following options:

## 19. Voice Input

- Press and release the **Microphone Key** to activate voice input and enter text through voice recognition. Start speaking as soon as the “Speak now” message appears.
